

THE MODERN APPROACH FOR CLOTTING ASSAYS

Assays designed with highly purified factors

Thrombin Inhibitors (DTIs) and Thrombin Time

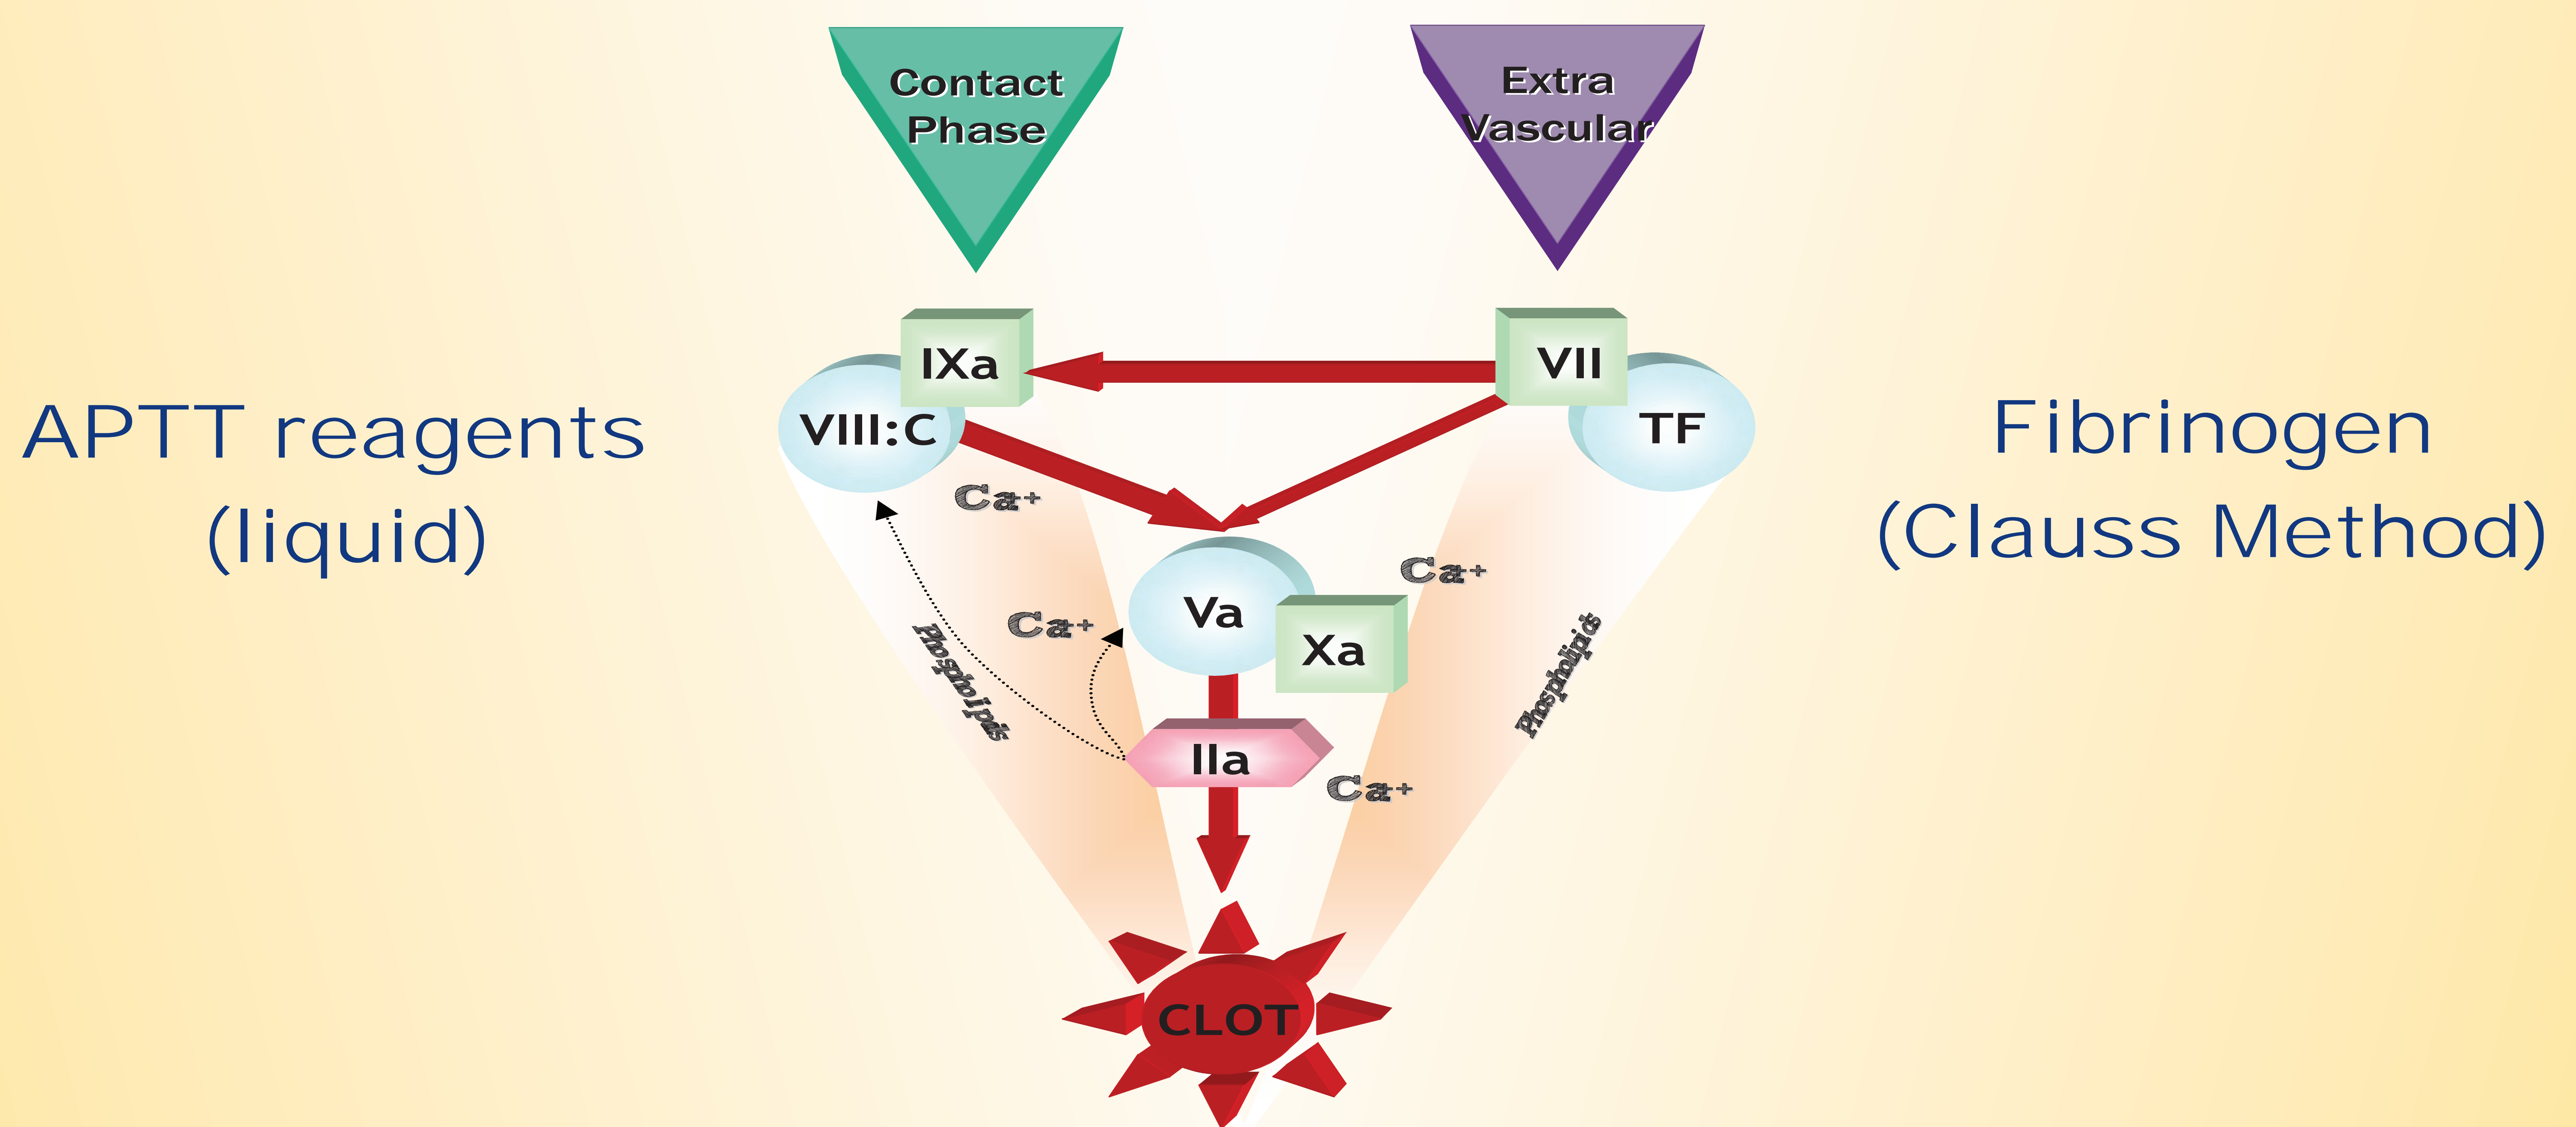

- Reagents designed with highly purified bovine or human thrombin, in the a-form

Coagulation Factors

- Specific measurement of Factors in human citrated plasma
- Use of purified clotting mixtures, as substitute to deficient plasmas

Offering a vast selection of deficient plasmas

- Human citrated, immunodepleted, freeze dried plasmas
- Improved optimization
- Reliable standardization
